DIAGNOSTIC IMAGING REPORT

PATIENT	WHITFIELD, Thomas	DOB / AGE / SEX	03/03/1960 / 66 / Male
MRN	LDI-0071245	ACCESSION	LDI-26-1007-0844
ORDERING PROVIDER	Samuel Brooks, MD, Northwest Austin Primary Care	EXAM DATE	10/07/2026 08:30 AM
INSURANCE	Bluebonnet Health, Bluebonnet PPO 500	MEMBER ID	BBH-9073-3318
REPORT STATUS	Final	REPORTED	10/07/2026 12:10 PM

EXAM:

CT CHEST, LOW-DOSE LUNG CANCER SCREENING

CLINICAL INDICATION:

Annual lung cancer screening. Asymptomatic. Former smoker, 30 pack-years, quit 2018.

TECHNIQUE:

Low-dose helical CT of the chest was performed without intravenous contrast. Axial images were reconstructed at 1 mm with coronal and sagittal reformats. CTDIvol: 1.4 mGy. DLP: 52 mGy-cm.

COMPARISON:

Low-dose CT chest dated 10/02/2025.

FINDINGS:

Lungs: 4 mm solid nodule in the right middle lobe (series 4, image 88), unchanged from 10/02/2025. No new or growing nodules. Mild centrilobular emphysema. No consolidation. The airways are patent.

Pleura: No pleural effusion or pneumothorax.

Heart and mediastinum: Heart size is normal. Moderate coronary artery calcification involving the left anterior descending and right coronary arteries. No mediastinal lymphadenopathy.

Lower neck: 11 mm hypodense nodule in the right thyroid lobe.

Upper abdomen: Unremarkable on this limited noncontrast exam.

Bones: Mild degenerative changes of the thoracic spine.

IMPRESSION:

1. Lung-RADS category 2: benign appearance or behavior. 4 mm solid right middle lobe nodule, stable since 10/02/2025. Continue annual screening with low-dose CT in 12 months.
2. S: Moderate coronary artery calcification. Clinical correlation for cardiovascular risk management is recommended.
3. Mild centrilobular emphysema.
